

RK-A - Feature #1544

Changes to match a token/word with hyphen with a header variant which does not have a hyphen but is exactly same

08/24/2021 09:18 AM - Anonymous

Description			
<p>This is a new feature we would like to add to our pipeline. We have observed a case where a token in the Whirlwind text file is "control-flow" and we have an exactly matching header "control flow" but they are not matched due to the presence/absence of hyphen.</p> <p>We need to make changes to ensure that they are matched with high confidence.</p> <p>The changes are to be made in the "get_candidates_for_variant" function inside the nested loops. We will have to add a condition that checks whether the current token contains a hyphen after a word i.e. follows the format "word1-word2" and "word1" is the same as the first word of header variant.</p> <p>E.g. the token is "word1-word2" and the header variant is "word3 word4 word5". we will check if "word1 == word3", if it is, we will process the KP such that it becomes "word1 word2" and call "candidate_variant_distance_calculation" function for it.</p> <p>Please note we will have to make changes in the candidate_variant_distance_calculation function such that for distance calculation, we will use "word1 word2" but while saving the candidates, we will use "word1-word2" format.</p>
