Description

In the C-API book, we saw KPs like "python/c" even when "python/c api" was present in the entirety. The reason is that "python/c api" is not a header variant. The header variants created are "python api" & "c api". While adding "word1 word3" & "word2 word3", we can add "word1/word2 word3" header variant as well. Look out for bad header variant cases and make appropriate changes.

We can save the new header variant in the processed_full_header list.

Test the idea with the C-API book & Lib Ref book.
