Category:			**Estimated time:**	0.00 hour
Target version:	1-RK-J-1		**Spent time:**	0.00 hour

Description

Create getPurpleLinksInfoExt api which takes the same input as getPurpleLinksInfo but makes the following changes in output:
1. changes in purpleLinkPhrases
-a. should contain only those with score > 0.8.
-b. should not contain duplicates.
2. changes in br2ir2:
-a. replace lurl with o-url
-b. remove score and similarityScore

Finally, please provide result as a list[s, list[sh,u]] if it exists or a null list [] if we do not have data for the input URL. s=purple link name; sh:section hierarchy; u=url.

Example output: s1,[sh11,u11],[sh12,u12, [s2,[sh21,u21]], [s3,[sh31,u31],[sh32,u32],[sh33,u33]]].

Fix for Feature #2879 - look for URL if there is no match for URL&t=0s AND look for URL&t=0s if there is no match for URL

1. if the url is not present in the datastore, check the url with &t=0s at the end(i.e url&t=0s)
ex: if https://www.youtube.com/watch?v=HtSuA80QTyo is not present, check https://www.youtube.com/watch?v=HtSuA80QTyo&t=0s

2. if the url&t=0s is not present in the datastore, check the url&t=0s without &t=0s at the end(i.e url)
ex: If https://www.youtube.com/watch?v=HtSuA80QTyo&t=0s is not present, check https://www.youtube.com/watch?v=HtSuA80QTyo
