**Support for internal-ourls** : The 'showCopilot' should be 'true' even if any of the "internal-ourls" is present in the "copilot\_urls"

**Bug:**

For all old books, show\_copilot is coming as false. This is incorrect. If the `copilot\_urls` field is not present in the text file, showCopilot should come as true for all urls of the book. so, it should be true for all the old books. Even for new books if the `copilot\_urls` field is not present, showCopilot should be true for all urls of the book.

Add this **fix** - When `copilot\_urls` field is not present in the datastore, set the showCopilot as true

**Support : Implement Copilot URL Wildcard Matching**

For the given Copilot URL pattern: "copilot\_urls": ["scikit-learn.org/\*blog\*"], (Note: blog could be any string)

If the copilot url contains \* then check if it is matching with the requested Ourl.

If the requested OURL is <http://scikit-learn.org/modulesblog/1/2/3> or <https://scikit-learn.org/1/2/3/4blog5> the matching should result in "showCopilot": true.
