Description

Today, loading part of the code is mixed with business logic. Separate it.

Extension picks version from manifest file. But, version is hard coded in snippet. One solution is to hard code version to 5.0. 5.0 stands for latest. Until a version is picked to be uploaded to the chrome webstore, extension also can use 5.0.

images are loaded from different paths for both extension and snippet. just need to be aware of this.
