Target version:		Spent time:	0.00 hour

Description

For now, we will only support Gemini* models from Google. So, if the prefix of the model name in "Gemini", please perform "set_prompt_mods <step number>" in https://colab.research.google.com/drive/149Llurg2xSyBHQEfExu_ey-hqr1XnMLo. In order to do these steps, some of the earlier steps (like imports etc) in the colab will have to be done also.

In set_prompt_mods_1: set index_name to be concat(<index>, "_index"). Do only the first time action.

In set_prompt_mods_2: do only the next time action. [Index end point name is rk_index_point which will be deployed outside code.]

In set_prompt_mods_3: do first time action only.

In set_prompt_mods_4,5,6: do all

Apart from instructions, prefix and suffix, other information necessary for the call_open_ai call will also have to be stored in the Datastore.
