1. Strip "#\$%" for cases where we have "#\$%<unknown pattern>". So, if you find '#\$%<known key><something1>#\$%Conclusion: <something2>', the value for <known key> should be '<something1>Conclusion: <something2>' instead of '<something1>'.
2. Sometime the key for sub steps will be provided as ' **Substep x.y** '
3. Remove the occurrences of ' **Substeps for step x:** ' from main step.
